Celebrating America's 250th And Another Unexpected Visitor at Butte Electric

Matt Sleep
CEO

Hopefully, everyone enjoyed the 250th anniversary festivities throughout the area over the 4th of July weekend. It seems like it is a short run to the Festival in the Park in Spearfish for the weekend of the 18th of July. Then a real fast trip to the Butte Lawrence County Fair for the Butte Electric Cooperative and West River Telephone Cooperative joint FREE barbeque on July 30th. We hope you can make it. This is our biggest event of the year. Our respective service teams spend

the year making sure that the lights are on and the communication lines are open. This is our opportunity to provide a nice meal in a great atmosphere and say thanks to everyone in our respective territories. Please come see the fair, visit with new and old friends, and enjoy a nice meal. I have included a picture of the serving line from last year's BBQ. See you at the BBQ on July 30th!!

We had another visitor at the Newell office. A cow and her calf escaped from a trailer at the gas station next door and came over to visit. After a little cowboying the Newell crew was able to corral them in the pole yard and help their owner load them back up so that they could continue their journey.

The South Dakota Department of Transportation is starting up a project on I-90 to do some shoulder work between Whitewood and Exit 17. The Sturgis and Newell crews went over for a week and moved the powerline out of the way of the construction work. Kyle took a couple of pictures that are included in this article. The first is a picture Kyle took from high above his truck in the bucket looking towards the interstate. He said that while he was up there a swarm of

honeybees came meandering their way through the oak trees around the vehicle and then down the draw and away. Later in the day, the whole swarm came back and hived up in a tree near where he was working. The second picture is one that he took of the hive, which is a solid mass of bees. The third picture is one of Jade finishing the work on the cross arm of a pole. If you fear heights, this would not be a comfortable place to be.

We've also had some contractors working on powerline right-of-way clearing over the last couple of weeks up in the hills. The contractor did a good job cleaning the right of way up considering that the topography is challenging with rocks, trees, and undergrowth. The trees don't stop growing.

July and August are the months when we all need to be focused on reducing the risk of fire around our homes, businesses, and properties. We recently added a section to our website that focuses on wildfire preparedness. If you go to www.butteelectric.com and then go to menu drop down in the upper left-hand corner of the home page and click on community, there is a "wildfire preparedness" tab there. We have included some helpful tips for protecting your home and personal documents in the event of wildfire. We have also included a copy of our "Wildfire Mitigation Plan" so our members can be aware of what our plans are in the event of a wildfire and what we are doing to help minimize the potential risk of wildfires. The South Dakota legislature also passed legislation in the past legislative session that requires utilities to post their Wildfire Mitigation Plans on their websites to make the public aware of our efforts at mitigating the risk of wildfires.

The Butte Electric Cooperative annual meeting of the membership will be held on October 20th at the Community Center in Belle Fourche. Registration starts at 5 p.m. with a meal and meeting to follow. Please plan on attending.

Have a great August. Thank you for your membership. Be safe!

Butte Electric Beacon Cooperative Connections is the monthly publication for the members of Butte Electric Cooperative, Inc., PO Box 137, Newell, SD 57760. Families subscribe to Cooperative Connections as part of their electric cooperative membership. Cooperative Connections' purpose is to provide reliable, helpful information to electric cooperative members on electric cooperative matters and better rural living.

Subscription information: Cooperative members devote 50 cents from their monthly electric payments for a subscription. Non-member subscriptions are available for \$12 annually. Periodicals postage paid at City, SD 57427.

Postmaster: Please send address changes to Butte Electric Beacon, PO Box 137, Newell, SD 57760; telephone (605) 456-2494; fax (605) 456-2496; email butte@butteelectric.com

This institution is an equal opportunity provider

As unmanned aerial systems (UAS) increasingly populate recreational and professional skies, safety remains paramount – especially near critical infrastructure such as overhead power lines. Today we reaffirm that drones should be flown in open spaces away from electrical lines and substations to prevent power outages and dangerous debris that can threaten public safety.

A drone colliding with a power line can cause outages and, if lines are downed, create serious electrical hazards for anyone nearby. Touching downed lines or debris that has fallen on fences, trees or other objects can result in severe injury or death. If you encounter downed power lines, immediately call 911 and notify emergency personnel and the utility company.

To ensure safe and compliant drone operations, follow federal registration and business-approval requirements, and stay informed about local, state and community regulations. FAA safety guidelines remain essential: Inspect your drone for damage before each flight and repair any issues prior to use. Fly at or below 400 feet unless FAA authorization or an allowed exception applies. Maintain visual line of sight; do not fly beyond it. Avoid airports, manned aircraft, stadiums and crowds of people. Do not fly for unapproved commercial purposes without FAA authorization. Refrain from flying in bad weather, including low visibility or high winds. Never fly recklessly or endanger others; violations can result in fines and penalties.

It is encouraged that drone operators plan routes

that maximize safety and minimize proximity to power infrastructure. Responsible pilots, adherence to FAA guidelines and awareness of local rules can prevent outages, injuries and potentially tragic consequences. For more information on legal requirements and best practices, consult FAA resources and your local utility providers.

Together, we can enjoy the benefits of drone technology while safeguarding our communities and critical electrical infrastructure.

As drone use expands, operators should build safety into every mission from the outset. Calibration, pre-flight checklists, and robust maintenance programs help catch issues before takeoff. Operators are encouraged to use situational awareness tools, such as real-time weather updates and wind assessments, to adjust flight plans accordingly. Community education events and outreach can foster a responsible culture among hobbyists and professionals alike, reinforcing the shared responsibility to protect power networks and nearby residents. By prioritizing safety, we preserve access to this transformative technology for all.

"Call 811 before you dig – always."

Laina Nelson, age 10

Laina reminds members to always call 811 before digging. Thank you for sharing your picture, Laina! Laina's parents are Nathan and Kristen Nelson – members of H-D Electric.

Kids, send your drawing with an electrical safety tip to your local electric cooperative (address found on Page 3). If your poster is published, you'll receive a prize. All entries must include your name, age, mailing address and the names of your parents. Colored drawings are encouraged.

Family FAVORITES

PARTY IN A PAN

Ingredients:

1 1/2 lbs. hamburger, browned
1 can cream of celery soup
1 can cream of chicken soup
1 box Stove Top Stuffing Mix
1 can corn, drained
3 cups mozzarella cheese, shredded

Method

Combine the hamburger, celery soup and chicken soup in a bowl and set aside. Prepare the Stove Top Stuffing as directed on the box. Layer half the hamburger mixture, half the corn, half the stuffing and half the cheese; repeat layers again. Bake 30-40 minutes at 350°F or until cheese is melted. Makes 9x13 inch pan.

Kathy Zomer
Douglas Electric

WALLEYE WITH HORSERADISH SAUCE

Ingredients:

2 lbs. walleye fillets
1 cup Lawry's Herb & Garlic marinade
1 tsp. Lawry's Season Salt
1 tsp. lemon pepper
1/4 cup butter
2 tbsp. horseradish
2 tsp. dill

Method

Marinate fish in herb & garlic marinade for 30 minutes. Drain. Sprinkle with season salt and lemon pepper. Bake fish until it flakes. Melt butter in saucepan. Remove from heat and add horseradish. Spoon onto fillet after cooked. Sprinkle on dill and serve.

Valerie Marso
Oahe Electric

BBQ MEATBALLS

Ingredients:

Meatballs

3# ground beef
1 can (12 oz.) evaporated milk
1 cup oatmeal
1 cup cracker crumbs
2 eggs
1/2 cup finely chopped onion
1/2 tsp. garlic powder
1 tsp. salt
1/2 tsp. pepper
2 tsp. chili powder

Sauce

2 cups ketchup
1 cup brown sugar
1/2 tsp. liquid smoke, or to taste
1/2 tsp. garlic powder
1/4 cup finely chopped onion

Method

Mix all meatball ingredients together and shape into meatballs. Place meatballs in a baking dish.

Mix all sauce ingredients together and pour over meatballs. Cover and bake at 350°F for one hour. The meatballs can be made ahead of time and frozen for several weeks. This makes a large batch, so it can be divided into smaller batches and frozen.

Karen Soulek
Charles Mix Electric

Please send your favorite recipes to your local electric cooperative (address found on Page 3). Each recipe printed will be entered into a drawing for a prize in December 2026. All entries must include your name, mailing address, phone number and cooperative name.

EFFICIENCY MATTERS FOR COMFORT

Miranda Boutelle
Efficiency Services
Group

Everybody wants a comfortable home. Did you know energy efficiency upgrades not only help you save energy, but can make your home more comfortable, too? If you find yourself continually returning to the thermostat on cold winter days or unable to find relief from heat on summer days, these are signs your home needs an efficiency upgrade.

No matter the home, energy efficiency upgrades often start with the same basic principle: Keep outside air from coming inside and keep conditioned inside air from leaking out. Insulation, air sealing, duct sealing and heating, ventilation and air conditioning upgrades can dramatically improve the comfort of your home.

A fully insulated home, including attic, walls and floor, is more comfortable. It's like a blanket for your home. Air sealing is a lesser-known efficiency upgrade that keeps air from entering and exiting the home through cracks and gaps. Some air sealing can be done from inside the home, such as using expanding foam around plumbing pipes and drains under sinks, adding gaskets to outlets on exterior walls, caulking around windows or weatherstripping around doors.

Attics and crawl spaces offer additional opportunities to reduce air leakage and increase comfort. In the attic, sealing gaps around top plates, open soffit areas, cove ceilings and balloon framing can help keep conditioned air where it belongs. In the basement or crawl space, seal around plumbing pipes and drains, vents and electrical wires. If you need help, contact a local contractor.

As a self-proclaimed energy geek, you probably aren't surprised that my first move when my husband and I bought our first home years ago was to air seal and insulate. We sealed and insulated the attic, walls and rim joists in

the basement. The difference in comfort was instant. Our house felt cozier and much more comfortable. The temperature swings from the furnace cycling on and off were dramatically reduced. The home felt warmer in the winter and cooler in the summer.

Another benefit from insulation was a surprising reduction in noise from outside. We lived about 15 minutes away from the airport and close to a busy road. When the windows and doors were closed, we could no longer hear the airplanes, and the traffic noise was almost unnoticeable.

Duct sealing can also improve the comfort of your home. Your ductwork delivers heated or cooled air in a forced-air HVAC system. If there are disconnections or leaks in the ducts, the air you paid to heat or cool may not end up where you want it. Disconnects and leaks can cause hot or cold spots in the home. An HVAC professional can inspect or test your ducts to make sure they are connected and sealed properly.

Air sealing and duct sealing can also improve the air quality in your home. Air leakage between the conditioned area of the home and the attic or crawl space can introduce dust, pollen, mold or other allergens you don't want to breathe. Reducing air leakage can reduce the chance of these things circulating throughout your home.

Upgrading to a heat pump can also boost comfort and efficiency. Heat pump technology is often about three times as efficient as electric resistance heat because it uses refrigerant to move heat instead of creating it. If you're upgrading from electric or gas heat, a heat pump can efficiently heat and cool your home, making it comfortable year-round.

If you already have a heat pump or any forced-air HVAC system, annual maintenance and regularly changing your filter maximize system operation and comfort.

Consider improving your home's comfort by completing these energy efficiency upgrades. Your family – and energy bills – will thank you.

WHO POWERS YOU?

For Dean Kueter, Community Service and Cooperative Values Run in the Family

Frank Turner

frank.turner@sdrea.coop

When something needs to be done in a small town, it often starts with someone willing to take the lead.

In Montrose, Dean Kueter has often been that person. Through years of involvement in local organizations, veterans' projects, school efforts and community work, Kueter has built a reputation as someone willing to step up.

That work did not go unnoticed. Tara Miller, manager of communications at Central Electric Cooperative and a former Montrose Area Foundation board member, saw Kueter's impact and nominated him for the fifth annual regional Who Powers You? contest.

Hosted by the region's Touchstone Energy Cooperatives, the contest recognizes local people and organizations making a difference in their communities. Kueter, a Southeastern Electric Cooperative member, was selected as Southeastern Electric's finalist.

"You do those things because you see there's a need and you want to make a difference in your community," Kueter said. "It was meaningful to be recognized for that."

In her nomination, Miller highlighted Kueter's work with the Montrose Area Foundation, his leadership with the local American Legion Post, his 20 years with the Montrose Fire Department and his passion for education and accessibility.

Kueter grew up outside nearby Humboldt and later served as superintendent for the Montrose School District before joining the Cornbelt Educational Cooperative. He is entering his 14th year with the education

cooperative, which serves nine school districts by providing special education and related services, including speech therapy.

"It's really a high-need area," Kueter said. Demand for specialized services continues to grow, while schools struggle to find qualified people for those roles.

Much of Kueter's volunteer work has centered on places and organizations that bring people together. He currently serves as commander of the local American Legion Post, which he said is more than a veterans organization in Montrose. It serves as a gathering place for the community, hosting dances, birthday parties, anniversaries, graduations and other events.

"It truly is a community hub and community center for everyone," Kueter said.

The post is improving the Veterans Memorial on Main Street through fundraising, new statues and landscaping. The Montrose Area Foundation has also supported local causes ranging from the fire department to school projects, youth programs and the swimming pool.

"People are oftentimes more than willing to help," he said. "They just need to be asked, and they want their time to be valued. So, if you call on them to come help with something, you need to make sure you have a job for them to do."

For Kueter, the cooperative connection extends beyond his own contest recognition. His family has also been honored through Southeastern Electric Cooperative's Touchstone Energy programs.

Both of Kueter's children, Kellen and Hallie, have been active in their school, church and community, taking on leadership roles through FFA, student

Dean Kueter, a Southeastern Electric Cooperative member and Montrose-area community leader, was selected as a finalist in the regional Who Powers You? contest.

council and the National Honor Society while also volunteering with local organizations.

Kellen was named a Touchstone Energy Scholar of the Week, received a 2024 Southeastern Electric scholarship and was later selected as Touchstone Energy Scholar of the Year. Hallie was also named a Touchstone Energy Scholar of the Week.

"Obviously, it's a proud parent moment," Kueter said. "Anytime your kid gets any type of recognition, it makes you feel good as a parent."

Kueter said he knows many people connected to Southeastern Electric, including lineworkers and family members who work in the electric cooperative world. As a member-owner, he said the cooperative connection is part of the broader network of relationships that tie rural communities together.

"I'm surrounded by great people who work hard to improve our community," Kueter said. "It takes a lot of people working together to have successful projects. I am just glad to be a part of the team doing this positive work in our community."

SOUTH DAKOTA
STATE HISTORICAL SOCIETY

A PAST FIT FOR THE FUTURE

A new lobby welcomes visitors to the Cultural Heritage Center.

Cultural Center & State Museum Reopens After Extensive Renovation

Jacob Boyko

jacob.boyko@sdrea.coop

After more than two years spent closed for renovation, South Dakota's state museum and cultural center is back up and running to share the story of South Dakota and its people with visitors from across the state and beyond.

The iconic museum built into the Pierre hillside held its grand reopening July 1 in time for the nation's 250th birthday, showing off new exhibits, a gift shop and an expansion that includes a larger meeting room and more space for its archives.

For Museum Director David Grabitske, the reopening marks a new chapter for the South Dakota State Historical Society, which oversees both the museum and state archives housed there. But it also honors the first laws set forth by the Dakota Territory's first territorial legislature, outlining specific steps and functions for historical preservation for untold future generations of its citizens.

According to Grabitske, many of the

first Dakotan settlers were determined to preserve the history they were making day by day as settlers on the vast American frontier.

"The first three acts [by the territorial legislature] were all about transferring property at the end of life – it's all about inheritance," Grabitske explained. "The fourth act of the territory created the historical society. In my mind, the fourth act goes along with those first three acts; it's about how we give things to the future."

Establishing a historical society demonstrated confidence that there would be a future for the Dakota Territory – complete with a permanent population that would live, grow and prosper there.

"We have a mantra around here," Grabitske said. "We collect today for tomorrow's history."

What that sentiment has amounted to is a sprawling collection of more than 17,000 cubic feet of paper, 50 terabytes of data on its servers, and more than 35,000 individual objects.

"The very first collections that arrived were in 1863, and we still have those in our library," Grabitske said. "They were

library books – 514 of them in 11 boxes."

In the process of collecting and disseminating information, historical societies at the time would collect and make copies of books to trade with other historical societies to expand their collections and diffuse knowledge across a wider area and reduce the risk of losing records to fire.

You'll find those 160 years' worth of books, deeds, contracts and reports

On the 150th anniversary of the Battle of Little Bighorn, Curator of Collections Katy L. Schmidt holds a can found on the battlefield.

Photo by Jacob Boyko

throughout the high-ceilinged, climate-controlled archive wing of the building – but you'll also find objects that aren't necessarily old or inherently valuable.

"The reason we add something into our collection is because it's historic, and what we mean by historic is it has significance and integrity," Grabitske explained. "Something being 'old' just fixes it in time. What makes something historic is that it is significant – it tells the story of people in South Dakota, and it has integrity, which means a certain completeness to tell that story."

To illustrate the point, Grabitske described a recent addition to the museum's collection – a painted tire with the words "no hunting."

"You see these things going down the road [in South Dakota], and we realized we were missing [one for the museum]," he explained. "We found one near Timber Lake which had a story. The lady who gave it to us (family of Dorothy Dopp, courtesy of the Timber Lake & Area Museum) had put it up in 1967 and she had faithfully painted it over the years and knew the dates she had painted it. We don't need 400 of these tires – we need one to represent the whole state."

Visitors to the museum this summer can experience the first three rooms of the updated exhibits. These sections house a welcome area, 'What is History?' exhibit and a gallery. The remaining sections are slated for completion in December 2026 and will feature exhibits on South Dakota's environment, people, politics, conflicts and more.

For more information on the Cultural Heritage Center and the South Dakota State Historical Society, visit history.sd.gov.

86th Annual Meeting of Butte Electric Cooperative, Inc. Belle Fourche Community Center

Registration and meal start at 5 p.m.

Annual meeting begins at 6 p.m.

Each year one board seat from each district is up for re-election.

Members wishing to run for a board seat can pick up a petition from the Newell Office.

The deadline for completed petitions to be turned in is August 20, 2026 at 4 p.m.

Understanding NERC, the Watchdog for a Reliable Electric Grid

Cathy Cash

NRECA

The country's electric grid with its hundreds of thousands of miles of high-voltage power lines is often described as a bowl of spaghetti. Yet 99.9% of the time when you flick a switch, the lights come on.

So, who is the bulk power system's chief detangler?

That would be the North American Electric Reliability Corporation, the official watchdog of the North American bulk power system. The international non-profit known as NERC sets mandatory reliability standards for all users, owners and operators of the electric transmission grid.

To maintain reliability, NERC oversees and evaluates grid conditions with support from six regional reliability organizations that serve as its on-the-ground partners in identifying potential problem areas. Each summer and winter, NERC releases seasonal grid assessments that evaluate whether electricity supply is sufficient to meet expected demand and highlight regions at risk of shortfalls.

These periodic reports analyze conditions that can increase demand, such as heat waves and severe cold, as well as factors that can constrain generation, including fuel or equipment shortages. They also include recommendations to address current risks and help prevent future problems. When unforeseen threats emerge,

NERC issues special assessments as needed.

Every year the organization also provides a long-term grid assessment looking ahead 10 years at what innovations or circumstances may impact the reliability of our interconnected electric energy transmission network.

Providing the electric power industry with timely insight into grid reliability, potential power shortfalls and strategies to address them is essential to keeping the lights on.

But wait, there's more.

NERC holds workshops, technical conferences and trains industry personnel on how to maintain a secure grid and audits owners and operators of the bulk power system to ensure they meet all reliability standards.

NERC also operates the 24/7 Electricity Information Sharing and Analysis Center (E-ISAC) that provides the power industry with the latest information on cyber threats, trends and possible solutions with alerts and advisories. E-ISAC develops and executes GridEx, the largest cyber and physical grid security exercise in North America.

Overall, NERC has come a long way from its humble beginning as an industry-led, voluntary grid watchdog. The big Northeast blackout of 1965 that impacted 30 million people led electric utilities to set up the entity to better coordinate grid dynamics.

Today, NERC is the nation's Electric Reliability Organization that oversees the operation and planning of the grid throughout North America. Empowered by the Energy Policy Act of 2005, NERC develops mandatory, enforceable reliability standards backed by the Federal Energy Regulatory Commission.

Utilities like South Dakota's electric cooperatives, for the most part, are not regulated by NERC. State agencies oversee the distribution power lines that deliver electricity to your home and surrounding communities. But NERC's authority over the bulk power system is critical to maintaining reliability in every part of the country, including the most rural areas.

Electric cooperatives that participate in NERC activities advocate for regulations that enable co-ops to plan, maintain and operate a reliable grid.

So how does NERC impact you as a member of an electric cooperative?

NERC helps ensure the electric grid remains reliable, secure and resilient for the millions of people who depend on it every day. By developing and enforcing reliability standards, monitoring the bulk power system and identifying emerging risks, NERC plays a critical role in supporting the safe delivery of electricity across North America.

For electric co-op communities, the work that NERC conducts means greater confidence that homes, schools, farms and businesses will have reliable power around the clock.

Oklahoma Electric

CO-OP SUMMER OUTREACH

Join Us at S.D. State Fair, Dakotafest, Minn. Farmfest

Jacob Boyko

jacob.boyko@sdrea.coop

Attention all co-op members! If you're heading to the South Dakota State Fair, Dakotafest or Farmfest this summer, stop by the Touchstone Energy Cooperatives booths for some great family fun and a chance to win a prize!

Make sure you fill out your coupon on the back of this magazine and bring it with you to the Touchstone Energy Cooperatives booth at the South Dakota State Fair or Dakotafest for your chance to win one of two electric grills sponsored by Karl's TV & Appliance.

South Dakota State Fair – Sept. 3, 2026

South Dakota's electric cooperatives will host the Touchstone Energy Cooperatives booth at the South Dakota State Fair in Huron, Thursday, Sept. 3, 2026.

This one-day event will feature a slew of energy-themed activities, from bucket truck rides lifting you more than 50 feet above the state fairgrounds to an interactive pole climbing demonstration complete with real spiked boots and climbing gear that linemen use every day on the job. We've also partnered up with South Dakota One Call to remind you to always call 811 before you start digging – but your kids are welcome to use our mini excavator in our sandbox to uncover buried treasure!

While you're here, check out our on-site displays for select highly efficient, all-electric heat pumps and mini-splits, water heaters, yard tools and more!

Find our booth near the Horticulture Building.

Dakotafest – Aug. 18-20, 2026

You'll want to stop by the South Dakota Touchstone Energy Cooperatives building at Dakotafest in Mitchell, Aug. 18-20!

Join us for fresh-off-the-grill brats, oven-baked cookies and freezie pops as you learn about the latest in home energy savings and efficiency. We'll have other cool stuff for you to check out, including an automatic lawn mower, a solar panel display and an EGO Power+ Portable Power Station.

Minnesota Farmfest – Aug. 4-6, 2026

Minnesota members, come visit your electric cooperative at Minnesota Farmfest near Redwood Falls, Aug. 4-6, 2026. Members may enter a raffle drawing for one of five battery-operated yard tools. We'll even have the high-voltage trailer on site for a live demonstration to remind visitors to be safe around overhead and buried power lines.

Kids perfected their utility pole climbing skills at the South Dakota State Fair.

THE POWER OF THE PAUSE

Sioux Valley Energy line workers take part in a job briefing before work begins. The tailgate safety discussion helps crews review the task, identify hazards and make sure each person understands the plan.
Photo submitted by Sioux Valley Energy

How Job Briefings Help Co-ops Think Through Safety

Frank Turner

frank.turner@sdrea.coop

Before an electric cooperative line crew begins work, the job starts with a pause.

The pause may only take a few minutes, but for crews working around energized equipment, changing weather and other hazards, those few minutes matter.

Before the first step of the job, line crews gather for a tailgate safety session – a documented pre-job briefing where they identify the task, hazards, protective equipment and plan.

For Travis Denison, manager of safety at Sioux Valley Energy, that conversation is one of the most important tools crews have to fight complacency.

“It forces our professionals to stop and go through the steps of the job they’re going to do and identify the hazards with each of

those steps,” Denison said.

Despite the casual name, a tailgate safety session is not a public demonstration or a quick conversation at the back of a pickup. It is a documented briefing used by crews before work begins. The goal is to slow down and communicate, making sure that everyone is focused on the work in front of them.

“These are jobs that our crews do every day, but all of a sudden something in the environment can change. There can be hazards that the crew didn’t talk about or recognize, and somebody can get hurt,” Denison said. “That job briefing or tailgate session is made to stop the crews, make them aware of their surroundings, talk about the job and each of the hazards, and discuss how they’re going to protect themselves.”

Denison’s focus on safety also runs in the

family. His brother, Joe Denison, is a loss control professional with SDREA – the same role Travis previously held before joining Sioux Valley Energy. Both came to safety work after years around line crews and firsthand experience with the risks of electric utility work.

“We were both linemen,” Travis said. “The more experienced you get as a lineman, the more you recognize the mistakes you made as an apprentice. You see the shortcuts that maybe you made yourself or that you see other linemen make.”

So how does a tailgate safety session actually work? The details change with the job, but the idea is the same: slow the job down before it starts.

For instance, if a crew is conducting a pole top rescue training, the briefing begins before anyone climbs. The crew identifies the emergency location, the people involved and who is leading the job and the protective equipment required.

Then they talk through the work itself. If the crew is practicing a mock mayday call or using a rescue manikin, they also talk through what could go wrong during the training. Someone could strain a muscle. A climber could make blunt contact with a pole or hardware. A falling object could injure someone below. Even a knife or hook could create its own hazard if people are not paying attention.

"We list the job, the steps of the job, the personal protective equipment we'll use and the energy sources," Travis said. "We talk about anything to do with the job before we start, so everybody's on the same page."

For Denison, the value of a job briefing is not limited to line crews. Members do not need a formal briefing form before starting work at home or on the farm, but they can use the same pattern to stay safe – name the job, look at the location, identify the equipment involved and talk through what could go wrong.

At home, that might mean looking up before raising a ladder, checking for power lines before trimming trees or calling 811

before digging a post hole, planting trees, building a deck or installing a sign.

That message is especially important on the farm, when large equipment may operate near overhead power lines.

"Be aware of the power lines," he said. "Have that talk. Communicate. Make the people you are working with aware of the potential dangers around them."

Sioux Valley Energy has also worked to carry that message to members through radio ads, videos and public outreach. The cooperative has shared reminders about overhead power lines, green boxes, construction work and the importance of locating underground utilities before digging. At times, Sioux Valley Energy has also partnered with Southeastern Electric Cooperative on public safety messaging.

Denison said the goal is similar to a crew's tailgate session: get people thinking before something goes wrong.

"Think about what you're doing," Denison said.

Personal at Job Site			
Signature	Signature	Signature	
<u>Joe Denison</u>	<u>Brad Rehner</u>		
<u>Danley Swartz</u>	<u>Tony Surana</u>		
<u>Billy Bob</u>	<u>Lynna Beckel</u>		
<u>Heath Church</u>	<u>Larry Hardin</u>		
<u>Jaime Pike</u>	<u>Derek Donson</u>		

This mock SDREA job briefing form, created for illustration, shows how line crews may document pre-job planning before aerial unit testing. The example highlights the kinds of details crews review before work begins, including location, personnel, work procedures, protective equipment, tools, energy controls and potential hazards.
